GRID AS LANGUAGE

The International Typographic Style emerged from Swiss design schools in the 1950s, establishing mathematical grid systems as the foundation of all visual communication. Objectivity, clarity, and rational structure replaced decorative excess with purposeful negative

"CLARITY IS NOT
SIMPLICITY—
IT IS PRECISION."

— JOSEF MÜLLER-BROCKMANN

THE 12-COLUMN GRID.

The twelve column grid provides a mathematical framework for organizing visual information. Columns may be combined in any proportion, creating flexible yet consistent layouts across all applications and formats.

Margins establish breathing room. The baseline grid aligns all typographic elements to a common rhythm. Asymmetry is intentional—never accidental.
